

Choosing & Installing Swift Nest Bricks

Swift Bricks installed by Notting Hill Housing Association / Barnet Council - simple, cost effective & neat

What's great about Swifts?

- Swifts are stunning the UK's fastest bird in level flight, faster than a Peregrine Falcon in a dive
- They bring us the Sound of Summer their screaming calls & dashing flight are unmissable
- They can liven up the grimmest places they'll nest in the bleakest of urban concrete jungles
- They've travelled so far to be with us they're only here for 12 weeks out of 52, spending the rest of the year in Africa over the Congo & Sahara
- They're a technological marvel Swifts use high-tech aerodynamic technologies that we
 developed for supersonic fighters, swing-wing bombers and drones
- They've been with us for 49 million years let's make sure they stay with us!
- They can eat up to 20,000 flying insects a day each many of them harmful or pests
- They can help you get Planning Permission installing Swift Bricks can meet Planners requirements and gain you BREEAM points too

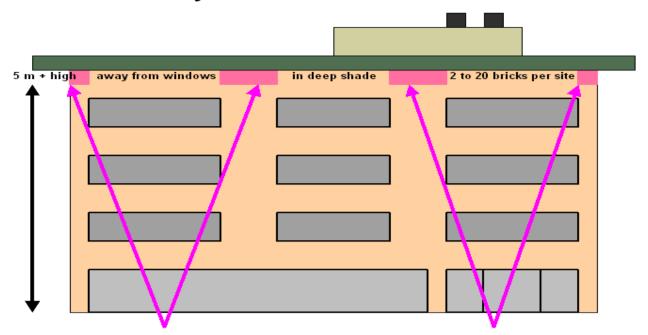

and

- Swifts are the cleanest birds ever they rarely defecate in the nest & eat their chicks' droppings
- They're so discreet you'll hardly know they are in the roof, nesting over your heads
- Wildlife is good for us! it makes us happier and healthier

Choosing the right site for your nest bricks is important

Fit the nest bricks on a side of the building that gets some shade during the day. If possible install them under an overhang or under the eaves, to give it protection from weather and heat, but not over windows or near to vents. It should be sited at least 5 metres above ground, with clear adjacent airspace so the Swifts can access it in high-speed direct flight (they usually fly straight in to avoid the risk of predation). Make sure that predators (cats, crows, magpies, squirrels, and rats) do not have easy access to the nest (e.g. by climbing up creepers or flying in from nearby trees).

Where to Install your Swift Bricks

Install the Swift bricks under the roof, in the top course of blockwork, in shaded areas out of direct sunlight, (shown here as pink blocks) and away from windows. Swift Brick installations do not usually generate any problems with droppings, but the Swifts may be disturbed by people staring at them!

Minimum height from the ground should be 5 metres, and the boxes should not be obstructed by trees, ladders or aerials.

Choosing your "Swift Brick" nest box

You can find a good range of Swift nest bricks illustrated below, with details of their suppliers, plus a brief summary of the various materials and types and their uses. Select the nest brick that meets your needs, your budget, and your ability to fit it. The more robust and longer lasting the nest brick and the more soundly it is fitted, the better it is for the Swifts.

Fitting the Swift nest brick

Good nest bricks and boxes are made to give many years of useful service, and so installation and any fixings used must be equally long-lasting. They may also be fitted behind metal and timber cladding, in which case the manufacturer's advice on suitable fixing methods should be obtained.

Keep yourself safe

Establish a safe system of work and follow scrupulously all safety advice before installing Swift bricks or boxes. Use the appropriate personal protective equipment required for the task.

Checking use and maintenance

Swift nest places do not usually need any cleaning. Many Swift bricks, if competently installed do not need any maintenance. Where boxes or bricks with removable covers are used, there will be a need to check those covers for integrity. We suggest this is done as part of the building's regular maintenance programme.

How many

Swifts like a few neighbours and a busy Swift colony will be a powerful attraction to other Swifts to come in and nest. So fit at least two to twenty boxes on your site, taking into account its size. For a house, two boxes, for a school or office or warehouse project, ten to twenty.

The Ibstock "Eco Home for Swifts" Brick clay and recycled plastic

Discrete and attractive terracotta box ideal for new and restored buildings Insert under eaves or in high walls - Terracotta & recycled plastic plank

Made to order - takes 10 to 14 days Available in smooth red, blue & cream clays Size 326mm x 140mm x 140mm Product code UNQ.SWIFT01 £POA

The ELIS-Plast nest box Lightweight plastic material

Made in the Czech Republic at an extremely competitive price, this box is designed for use together with insulation "bats" applied to external walls, and then plastered over to give a smooth finish.

These innovative lightweight weatherproof boxes can be fitted under eaves too, and they provide snug nesting space at very low cost.

UK models are fitted with an inner plywood floor lining and a Starling resistant entrance.

We are investigating the possibility of a flat fronted box of the same material for flush-fitting – it may be available in 2015.

The Bird Brick Houses nest box Plastic and brick

This box is made from a plastic box with a detachable plastic front frame holding your own brick or stone finish, made to your needs, and set into the wall.

This box can be supplied with various front panels permitting entry by Swifts or several other bird or bat species. It matches neatly into standard brick patterns, and even into flint walls.

Schwegler "Woodcrete" Bricks & Boxes of Cement –fibre compound

Swift nest bricks from Schwegler are made from a concrete & fibre compound known as "Woodcrete".

A mixture of cement and plant fibre, it is strong and long lasting, if heavy.

Such boxes, if sensibly sited and maintained, have the potential to last as long as the building, making them particularly attractive and cost effective.

Attracting the Swifts - using the Swift Calls CD

It can take a while for Swifts to find a new nest place. But nest site occupation can be speeded up if a recording of Swifts' attraction calls is played to attract them. Full instructions plus CD and MP3 recordings of the calls are available from us - see below for contact details.

Do's & Don'ts

Don't disturb the Swifts at any time - they will desert the nest

Don't attempt to handle the birds unless you are a BTO Licensed Ringer

Don't allow creepers or plants to encroach on the nest as they will give access to predators, like Squirrels

Some Examples

Antrim Public Library, Northern Ireland: Ibstock Swift bricks were used to bring life to this featureless wall

Swifts used the Antrim nest bricks in 2014

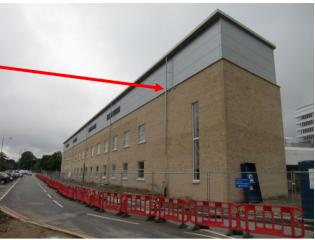

Eight Schwegler Swift Bricks were installed and hidden behind the plastered facade of the new Cullompton Library in Devon

The New Library at Cullompton - the Swift Bricks are scarcely visible but should bring some aerial life and action to this new site

Two Schwegler Swift Bricks installed in the walls of the Maternity Unit at the Lister Hospital NHS Trust Stevenage Hertfordshire

Left & below:

An example of Swift Bricks being used on a major project: the "Pelikan" construction site, built by GUNDLACH, a well-known construction company, in Hannover, Germany

80 Swift bricks were incorporated in the walls of this new development which will bring Swifts flying over this huge modernisation project
